

Date A Dog

A dating game to find your new best friend.

Landing Page

DATE A DOG

Instructions

You are on a date. Click on the right answers to fill the love meter and take your pal home. Why don't you introduce yourself to your date?

PLAY

Game Features

Date a Dog features Scout the dog, asking you typical first date questions.

She'll give you four answers, and based on your answer, she'll give you between 0 and 3 points to add hearts to your Love Meter.

Accrue enough points, and you'll get to take her home.

Answer the questions wrong, she'll send you packing.

LOVE METER

WHY ARE YOU SINGLE?

I'M NOT, I'M JUST HERE TO GET A DOG!

TESTING THE WATERS

I LIVE WITH MY MOM

HANGS HEAD IN SHAME

Problems Encountered

- **Vanilla JS -> JQuery:** I wrote my code initially in Vanilla Javascript and thought I could refactor in JQuery when I was done. I changed everything over, but the game stopped working and it wasn't throwing any errors, so I couldn't troubleshoot.
- **CSS Animations:** I wanted to add CSS animations based on a click event, but wasn't able to figure it out. Instead I decided to toggle visibility of the element so it appears to be moving based on the click event.
- **Looping Issues:** I had a lot of trouble populating the questions on a loop. They kept populating all at once. I ended up using a counter to slow them down and have them only appear one at a time.
